Result

Pred. No.

No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, serived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                               Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq iength:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC This invention describes a novel C-terminal fragment (I) of an isolated CC prolactin releasing peptide (PrRP), referred to as prRP20 and having a CC sequence (S1). The invention aiso describes (1) a therapeutic composition (C1) comprising (I) or a C-terminal fragment of PrRP referred to as prRP8 CC and comprising a sequence (S2); (2) a diagnostic method based on antisera against PrRP20 for identification of disorders involving the central CC regulation, where specific antisera against the N-and/or C-terminal CC domains of PrRP is used to identify alterations in PrRP synthesis or CC levels; (3) a rat or human receptor encoded by a 1122 nucleotide sequence (S3), fully defined in the specification; (4) treating a person suffering CC (S3), fully defined in the specification; (4) treating a person suffering CC interested sequence, fully defined in the specification, located in the receptor; and (5) treating blood pressure, by blocking of receptors of PrRP or its C-terminal fragment GlylleArgprovalGlyArgphe-NH_2 (S2). The products of the invention have analyses and hypotensive activity. C (1) is useful for regulating autonomic functions, such as increasing competions of the invention have analyses and hypotensive activity and antagonist of (II) are useful for treating pain, for manufacturing a medicament for regulating blood pressure, and for treating pain. Agonist cand antagonist of (II) are useful for regulating acute pain, inflammatory treating high blood pressure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW95178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT

The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled cryphan receptor designated CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of CC the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Schizophrenia; disorders of growth hormone secretion; cancer: CC operative nutritional status and as vasopressor. Transgenic animais CC carrying the ingand polypeptide encoding DNA or its mutein are used to Study the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC related sequences; in receptor-bindling assays; for production of Ab and CC canisters which can be used for the arremarking of activation of Ab and CC canisters which can be used for the arremarking of activation of Ab and CC canisters which can be used for the arremarking of activation of Ab and CC canisters which can be used for the arremarking of activation of Ab and CC canisters which can be used for the arremarking of activation of Ab and CC canisters which can be used for the arremarking of activation of Ab and CC canisters which can be used for the arremarking of activation of Ab and CC canisters which can be used for the arremarking of activation of the polypeptide canism of activation of Ab and considered to the canism of activation of the control of the control of the cont

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This peptide contains the partial C-terminal sequence of the synthetic CC Ligand polypeptide 1992-131 which is capable of binding to a G C protein coupled receptor protein. This peptide is used as an antigen to CC prepare rabbit anti-bovine 1992-131 antibodies which are used in binding CC assays. Pharmaceutical compositions containing this ligand may be used CC as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific CC applications as a prophylactic or therapeutic agent for dementia, CC depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, CC hyper and polyphagia, hyperlipidaemia, hyperchoisaterolaemia. The prophylactinaemia, diabetes, cancer, pancreatitis, CC hyperlyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, CC spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral CC sciencesis, acute myocardial infarction, infertility, spinocerebellar CC degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oilgogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand CC affecting activation of the C protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAW97229-31 rcpresent a ligand polypeptide derived fragments used to produce antibodies. The specification describes an agent for modulating C productin secretion which comprises a ligand polypeptide or a sait, for a G protectin-coupled receptor (GPCR) protectin. The agents for promoting CC prolactin secretion can be used for treating or preventing CC hyponetabolism. They can by used for promoting lactation in a domestic mammaal and as an aphrodistac. The agents for inhibiting prolactin CC mammaal and as an aphrodistac. The agents for inhibiting prolactin CC secretion can be used for treating or preventing pituitary adenomatosis, CC chiari-frommel syndrome, argonz-dei Castilo syndrome, Forbes-Albright CC syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory CC agents can also be used as contraceptives. The agents for modulating CC choricoarcinoma, hydatid moie, irruption moie, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal ipidmetabolism or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ilgand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 1992 ilgand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

AAW3 13
                      This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the Sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a composition or therapeutic agent for dementia, depression, hyperkinetic compositions, a central nervous system modulator or a pancreatic function CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic cutrauma, growth hormone secretory disease, hyper- and polyphagia, CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperilpidaemia, hypercholesterolemia, hyperglyceridaemia, hypergrolactinamia, disbetes, cancer, pancreatitis, renal disease, hyperprojection in the composis, asthma, rhoumatold arthritis, spinal injury, CC transient brain ischaemia, epilepsy, amylotrophic lateral scierosis, acute myocardial infarction, infertiiity, spinocerebellar degeneration, CC consistent brain ischaemia, epilepsy, amylotrophic lateral scierosis, acutivation of the binding activity of the ligand affecting cativitien of the floriding activity of the ligand affecting activity of the ligand affecting activity of the ligand affecting activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ş
                                               This sequence represents a peptide fragment from a novel rat type CC ligand polypeptide corresponding to amino acid residues 33 to 52 of the CR sequence represented in AAW31383 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function cm coupletor. This sigand could have specific applications as a modulator. This sigand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, schizophrenia, compositions of the consciousness, anxiety syndrome, schizophrenia, compositions, growth hormone secretory disease, hyper- and polyphagia, hyperilpidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, panoreatitis, renai disease, hyperprolactinaemia, neurosis, asthma, rheumatoid arthritis, spinal injury, cutansient brain ischaemia, epilepsy, amylotrophic lateral scierosis, concertain disease, hyperglyceridaemia, rheumatoid arthritis, spinal injury, caute myocardial infarction, infertility, spinocerebellar degeneration, confirmed the demantitis, osteoporosis and/or collogogalactia, Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting cativation of the 6 protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Local Similarity 100.0%; | Matches 5; Conservative 0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-SEP-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                 CC derived ligand corresponding to amino acid residues 34 to 53 of the CC derived ligand corresponding to amino acid residues 34 to 53 of the CC sequence in AAW31368 and is used in an assay to monitor ligand binding CC to the G protein coupled receptor protein. Pharmaceutical compositions CC central nervous system modulator or a pancreatic function modulator. a CC central inguilation system modulator or a pancreatic function modulator. CC therapeutic agent for dementia, depression, hyperkinetic syndrome, CC disturbance of consciousness, anxlety syndrome, schizophrenia, trauma, CC growth hormone secretory disease, hyper- and polyphagia.
CC hypercholesterolaemia, hyperglyceridaemia, hyperlipidaemia, hypergrodactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperrolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC transient brain ischaemia, amylotrophic lateral Belerosis, acute myocardial infarction, spinocerabeliar degeneration, bone fracture, CC trauma, atopic dermatitis, osteoporosis, asthma, epilepsy, infertility CC and/or oliopogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                        The present sequence represents a bovine pltultary-derived ligand CC fragment. It is used in the course of the invention. The specification CC describes an agent for modulating prolactin secretion which comprises a citigand polypeptide or a salt, for a gprotein-coupied receptor (GPCR) CC protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal CC syndrome, euthyroid or hypometabolism. They can by used for promoting cc inhibiting prolactin secretion can be used for treating or promoting cc inhibiting prolactin secretion can be used for treating or preventing cc prolactinoma. Infertility, impotence, amenorrhea, galactorrhea, cc caromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Frombes, albright syndrome, lymphoma, Shechan syndrome or dyszoospermia. The inhibitory agents can also be used for treating or preventing cc choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prolactinoms; infertility; impotence; amenorrhea; galactorrhea; acromegaly, Chiari-Frommel syndrome; Argonz-del Castillo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; tyzoospermia; contraceptive; placental function; chorlocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism;

The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypoverianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pluvitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, cormegaly, Chiari-Frommei syndrome, Argonz-del Castilo syndrome, for The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.

                                             CC is used in the course of the invention. The specification describes
CC an agent for modulating prolactin secretion which comprises a
CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)
CC protein. The agents for promoting prolactin secretion can be used for
CC treating or preventing hypocourianism, gonecyst cacogenesis, menopausal
CC syndrome, euthyroid or hypometabolism. They can by used for promoting
CC lactation in a domestic mammal and as an aphrodisiac. The agents for
CC inhibiting prolactin secretion can be used for treating or preventing
CC inhibiting prolactin secretion can be used for treating or preventing
CC prolactionma, infertility, impotence, amenorrhea, galactorrhea,
CC acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,
CC forbes-Albright syndrome, lymphoma, Shechan syndrome or dyszoospermia.
CC The inhibitory agents can also be used as contraceptives. The agents for
CC modulating placental function can be used for treating or preventing
CC choricoarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,

Abortion and approximation of preventing or preventing abortion and abortion and approximation of preventing the contraceptives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                믕
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pituitary adenomatosis; brain tumour; emumeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g protein coupled receptor; GPCR; hyponvarianism; gonecyst menopausal syndrome; euthyroid; hypometabolism; lactation;

                                 The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the CC polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntigton's CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC carrying the ligand polypeptide encoding DNA or its mutchn are used to cstudy the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC enlated sequences; in receptor-binding assays; for production of Ab and CC enlated sequences; in receptor-binding assays; for production of Ab and CC enlated sequences; in receptor-binding assays; for production of Ab and CC enlated sequences; in receptor-binding assays; for production of Ab and CC enlated sequences; in receptor-binding assays; for production of Ab and CC enlated sequences; in receptor-binding assays; for production of Ab and CC enlated sequences; and content of the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ő
                                                   The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPRIO (human) or UHR-1 (rat). Cell; transformed with a vector containing CC the ligand polypeptide encoding DNN are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of CC the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; chalzophrenia; disorders of growth hormone secretion; cancer; CC diseases; schlzophrenia; disorders of growth hormone secretion animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of CC study the function of the polypeptide-expressing genes, as models of CC study the function of the polypeptide sayays; for production of Ab and CC polypeptide DNA is used as a source of probes and primers; to identify created sequences; in receptor-binding assays; for production of Ab and CC cantisers; in drug development; for gene therapy and to develop epitide epitotes which can be used for the preparation of anti-ligand polypeptide epitotes which can be used for the preparation of anti-ligand polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local Similarity

"A prolactin-releasing peptide in the brain.";
nature 393:272-276(1998)
-I- FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPRIO. May stimulates the control of the prolactin through its receptor of the prolactin lactotrophs directly to secrete PRL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-MAY-2000 (Rei. 39, Created)

FUNCTION: VISUAL PIGNENTS ARE THE LIGHT-ABSORBING MOLE MEDIATE VISION. THEY CONSIST OF AN APOPROTEIN, OPSIN, LINKED TO CIS-RETINAL.

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: LATERAL EYE.

PTM: SOME OR ALL OF THE CARBOXI-TERMINAL SER OR THR R
BE PHOSPHORYLATED (BY SIMILARITY).

BIS PHOSPHORYLATED (BY SIMILARITY).

MISCELLANEOUS: THIS OPSIN HAS AN ABSORPTION MAXIMUM AT SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            s SWISS-PROT entry is copyright.
